

Installation manual
Kids Place

1.
Clean the surface from any dirt, dust and grease.
The sticker will then adhere better to the surface.

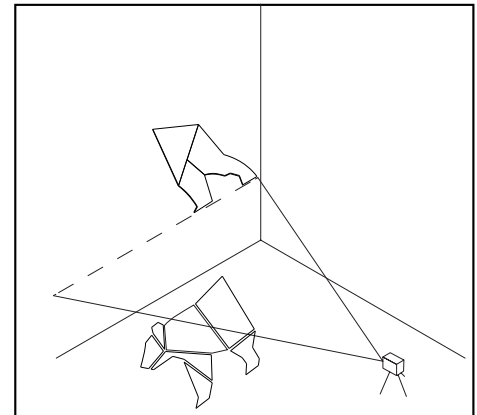

2.
First lay out the pattern on the floor.
This will prevent any errors.

3.
Project or draw a horizontal line with a pencil.
You can decide on the width and height of the line
you want to go for.

Check this using a spirit level.

4.
Remove the backing strip from the sticker. Place the
lower part of the shape against the wall so that it can
be positioned at two points equal to the horizontal line.
Now press the element firmly and do exactly the same
with the other elements.

Please note! Any glued wall element removed will no longer stick. In which case,
follow these steps:

- Remove as much tape residue from your wall as possible
- Install the element once again using installation kit
